## **DETAILED ACTION**

### ***Drawings***

1. Figures 1-5 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1, 7, 11, 17 are rejected under 35 U.S.C. 102(e) as being anticipated by Jones, IV et al. U.S. Patent 6,657,950 B1.

Regarding claim 1, Jones, IV et al. teaches systems and methods for converting a baseband OFDM signal to an IF signal while minimizing lengthening of the impulse response duration experienced by the OFDM signal.

In column 8 lines 25-40, Jones, IV et al. teaches a method for transmitting OFDM signals comprising the steps of:

receiving an N-symbol frequency domain symbol burst;

zero-padding said N-symbol frequency domain symbol burst to form an  $M \times N$ -symbol frequency domain burst;

and transforming said  $M \times N$ -symbol frequency domain symbol burst into an  $M \times N$ -symbol time domain burst.

Regarding claim 7, as further disclosed in column 5 lines 45-60, Jones, IV et al. teaches that the N-point frequency domain sequence input to IFFT processing block 402 is zero-padded to become a  $2N$  point frequency domain sequence with  $N/2$  zeroes being placed before and after the original N-point sequence. IFFT processing block 402 then performs a  $2N$  point IFFT rather than an N point IFFT.

Regarding claim 11, claim is rejected on the same ground as for claim 1 because of similar scope.

Regarding claim 17, claim is rejected on the same ground as for claim 7 because of similar scope.

***Allowable Subject Matter***

3. Claims 2-6, 8-10, 12-16 and 18-20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

***Conclusion***

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Jones, IV et al. U.S. Patent 6,487,253 B1 discloses "OFDM Channel Estimation In The Presence Of Interference".

Dowling U.S. Patent 6,597,745 B1 discloses "Reduced Complexity Multi-carrier Precoder".

Raphaeli et al. U.S. Patent 6,614,864 B1 discloses "Apparatus For And Method Of Adaptive Synchronization In A Spread Spectrum Communications Receiver".
